THE BEST OF SYSTEM INTEGRATION FROM A SINGLE SOURCE

OCTOBER 2024 SALES FLYER

GRANDSTREAM - Are you offering VoIP phone lines?

Many Grandstream IP PBX systems end up getting connected to analog phone lines, or even IP lines that go through a gateway and are connected to the system by an RJ-style connector. Grandstream certainly supports this and it works really well, but there is a better way! Usually called SIP Trunks, we are talking about phone lines that come in to the system over the WAN connection, and there are many benefits. When you set up SIP Trunks with the service provider you use, you need to determine how many talk paths you need and how many phone numbers you need. It's important to note that this does not need to be a one-to-one relationship. It is very common to have more phone numbers (called DIDs) than lines. Maybe you have some DIDs for staff to have direct numbers and maybe some departments get their own DID and that totals up to ten phone numbers. You may still only need six lines to handle the volume of calls that the system will receive.

The setup and management of SIP Trunks is far easier than analog lines. Simply define in the Grandstream PBX where each phone number is meant to go (a group of extensions, a single extension, a menu tree, etc) at what time of day. If you have ever set up a "hunt group" with a phone service provider you know how challenging it can be. There is no need for that with SIP Trunks.

Pricing is another major benefit. In many cases SIP Trunks save a customer so much on their phone bill that it can pay for their new phone system in a couple of years or less. A line is \$1 per month, a DID (phone number) is \$2 per month, and calls are \$0.01 per minute.

2 CO LINE PBX, SUPPORTS UP TO 500 USERS AND 150 CONCURRENT CALLS, GDMS AND WAVE-COMPATIBLE
GRAUCM6302A **\$254.42**

WIRELESS INDOOR/OUTDOOR SIREN/STROBE

NAPSIREN.....**PROMO \$78.75**

Tech Note: Napco Prima Wi-Fi cameras have a quick-install feature that makes initial installation easy and ensures the cameras stay online even if the Wi-Fi name changes. They call it self-healing Wi-Fi. In addition to Wi-Fi, the cameras also have the same 433MHz radio that the sensors have. When the main panel is joined to the Wi-Fi it sends that info over the 433 radio to the cameras so they can join.

Yale Pro 2 Z-Wave Locks – Supported by Napco Prima

With a sleek new look and smaller footprint, the Pro 2 provides a modern aesthetic that fits a wider variety of door configurations. It is offered in a multitude of radio options, colors, and keyed or key-free models, all of which offer a 90-minute fire rating. This month we are highlighting the Z-Wave models, which are an excellent fit for the Napco Prima security system. User codes in the Prima panel are automatically synced to the Yale locks.

PRO 2 LOCK, KEYPAD, KEYWAY, Z-WAVE

Leviton Z-Wave Lighting:

Looking to add lighting to your Napco Prima installation? Leviton's Z-Wave lighting devices are a solid choice. With a modern look that matches other decorator-style devices and broad LED compatibility on dimmers, you really can't go wrong. Leviton Z-Wave lighting is a go-to choice for many security system installers regardless of the brand of the panel.

SPECO
 Save on High-Performance 8 Ohm Speakers!

Speco has a long history in the speaker business. Although they are well-known for 70-volt commercial systems, they have a solid offering in the residential 8-Ohm space. The STSPCDC6 is a great fit with any multiroom audio solution, but also pairs well with Speco's A-Live streaming amplifier. Give us a call to learn more.
